

Product Data Sheet for Shop Floor Data Collection

The Shop Floor Data Collection module automates the collection of Work-in-progress data from the production shop floor. The screens are designed with user-friendly interface, large fonts and with minimal key strokes.

Overview of Features

1. Integrates with Routing & Work-in-progress module.
2. Automates the data collection of WIP data with the help of bar-code devices.
3. Clock-in and Clock-out options are used to scan the start and end of a specific production process. The production number, date, time, machine ID and labour ID will be captured.
4. A Data Collection Confirmation screen allows the production supervisor to view and confirm the posting of the WIP data.

Additional module required

1. Routing & WIP Module
